

The platform pads come with an adhesive strip which must be placed on the platform. The adhesive strip must be attached to the top and bottom of the platform. Line up both pads on the sides of the platform. The adhesive strip must be cut to accommodate the curve of the platform. This cut should be 22 inches, or where the turn of the platform begins. The smaller portion of the adhesive strip (roughly 4") should be put on the platform at a 45 degree angle to accommodate for the curve of the platform.
